

Improving the Healthcare Environment: Flooring Selection

Accredited by: IDCEC, EDAC, AIA (HSW)
1.0 LU/ HSW

This presentation is a comprehensive and objective overview of the science that accurately describes the relationship between flooring and human health and safety in healthcare environments and on hospital performance.

Learning Objectives

- + Understand the relationship between flooring and health and safety in hospitals.
- + Assess the infection prevention, IAQ, acoustic and safety properties of different floor coverings.
- + Identify flooring factors that can impact patient and staff outcomes.
- + Explain to others the importance of considering these factors when specifying flooring.
