

Reduced environmental impact

Due to its lower mass, Kinetex has a 50% lower environmental impact compared to other traditional floor coverings. J+J Flooring Group has completed an extensive life-cycle assessment that offers a transparent disclosure of the full environmental impact, and the results have been verified by an independent third party, NSF International.

Kinetex is also NSF-140 Platinum Certified.

Closed-loop recyclable

At the end of its useful life – Kinetex can be recycled into itself as easily as a plastic beverage container.

Certified EPD and HPD available at jjflooringgroup.com.

Kinetex is specifically designed and engineered to minimize environmental impact. From manufacturing processes to materials, sustainable innovation is at the forefront of this textile composite flooring.

Flash

Recycled content

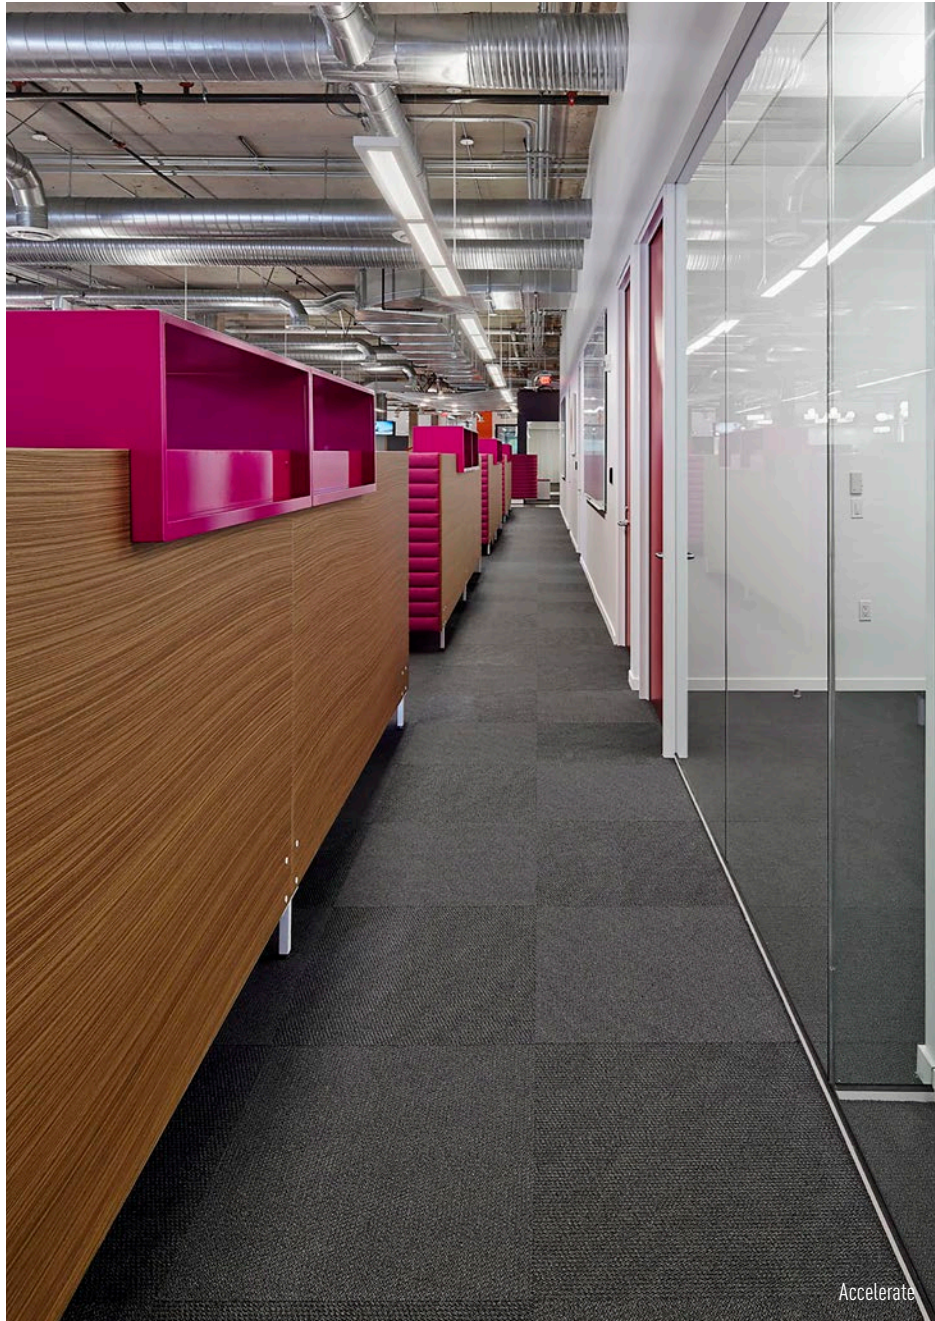

Kinetex contains more than 55% post-consumer recycled content, and 16% of the total weight is made from recycled PET commonly sourced from plastic beverage containers.
