
Floor Covering Sanitation

Vital Oxide is our recommended solution for sanitation and virus mitigation. Please follow the product instructions. Currently that product is in short supply. Another recommended solution is a 50/50 mix of 3% hydrogen peroxide and water. This product is readily available. According to the CDC, 3% hydrogen peroxide is a stable and effective disinfectant against viruses. The solution should be allowed to remain on the surface for several minutes. For soft surfaces like carpet, we recommend agitating it into the fibers.

Application rate: 1 QT/250 sf

Detailed application procedures and recommended personal protective equipment can be found on the CDC website at www.CDC.gov.
