

Ozarks Technical Community College

kinetex® *Textile Composite Flooring*

Performance & Durability

Approximately one year ago, the new Kinetex line was introduced to Ozarks Technical Community College. After reviewing the specifications of this new and innovative textile composite flooring, OTC installed Kinetex into a couple of Fine Arts classrooms due to acoustical issues within the rooms. The noise issues were resolved and Kinetex is proving to be durable and manageable in regards to cleaning by the custodial team. When OTC elected to infill the fourth floor of their new Table Rock campus building, in Hollister, MO, Kinetex was the obvious flooring choice based on observed performance and durability. The new fourth floor was designed as a large community room and with anticipation of a significant number of events that will entail food, drinks and pedestrian traffic. According to Rick Taylor, College Director of Facilities and Grounds, "The new Kinetex textile composite flooring has exceeded our expectation in regards to installation, appearance and overall cleaning performance."

"As OTC moves forward with its floor maintenance and replacement programs, the Kinetex line will receive top consideration as a replacement option."
