

FLOORING + SAFETY

IN SENIOR LIVING AND RESIDENTIAL CARE ENVIRONMENTS

Flooring + Safety in the Senior Living and Residential Care Environments is a comprehensive overview of the science that accurately describes the relationship between flooring and safety in places where seniors live. It is an objective discussion of the safety properties of various types of flooring and the implications of those properties on residents and staff.

LEARNING OBJECTIVES

- + Explain how flooring contributes to safety in senior living and residential care environments.
- + Assess the safety properties of different floor coverings.
- + Explain to others the importance of considering safety properties when specifying flooring.
- + Understand the relationship between the safety properties of flooring, the lifecycle costs of the flooring and provider's bottom line.
